

CHANGES TO KOMAND FOR V620

Modifications to KOMAND/CCS for V620

- For any field with duplicate names in the Dictionary record, the second entry has the last character replaced with an “A” making a new field for use within KOMCCS.
- Added the Transaction Server version to the CMFDDT.
- To select different Transaction Server versions for CHRGCODE assignment, the hex values are converted to decimal and usable in the SPCL statement.

Modifications to KOMAND/COM for V620

- Corrected the SUR layout for the old format for the KOMKR2MR program.
- Corrected the 88-LEVEL in COPYLIB member JUR4ABVC.
- Corrected the logic to eliminate any SMF records from the previous cycle.
- Increased the field length on the statements to allow 3 characters.

Modifications to KOMAND/DAMS for V620

- Placed a counter for date-time records to make sure the first record processed in DAMCONST is the date-time record from DAMSREFM. Prevents an ABEND with a 453 return code.
- Reduced 491 SEGMENTS to 490 to prevent an S002-18 ABEND.

Modifications to KOMAND/DAS for V620

- Corrected a subscript that caused erroneous rate to be printed on the rate report.
- Corrected the account number being truncated on the STMT print area for DAMSVALID.
- Corrected TOTALRPT record counts in DASSORT.
- Corrected a possible ABEND S0C4 when processing SMF TYPE 25 records by bypassing the unnecessary JOB NUMBER logic for the TYPE 25 records.

- Changed the logic to correct DROPRPT record counts on the summary portion to match the detail portion in DASSORT.
- Changed the logic in DASCOST to ensure that the ZIIP time is used only once when processing SMF continuation records.
- Removed the WTOR field from CNTDTAIL.

Modifications to KOMAND/DBCS for V620

- Corrected the loading of offsets for variable fields by changing the code to load half-words.
- Replaced the DB2DDT with the correct starting position offsets for the ZIIP CPU fields

Modifications to KOMAND/DIS for V620

- Increased the record size for the sort to prevent an IEC217A message.

Modifications to KOMAND/FMS for V620

- Changed the logic to place the billing indicator in the JUR after validation of the account in the Master File.

Modifications to KOMAND/ICS for V620

- Changed the field definition so that the data is not manipulated, but simply moved.
- Corrected the length of the redefined field.

Modifications to KOMAND/IDCS for V620

No modifications for this release.

Modifications to KOMAND/SCSU for V620

- Changed “COSTLEVEL =” to “CHRGCODE ” when there are multiple CHRG entries to clarify cross footing the KAR to FMS reports.
- Corrected code to compile on Linux V11.1

Modifications to KOMAND/SCSW for V620

- Added support for Oracle Version 8i or later
- Corrected code to run on Windows® Server 2008

Modifications to KOMAND/UCS for V620

No modifications for this release.

Modifications to KOMAND/VMCS for V620

No modifications for this release.
